EDUCATION

University College London **Sep 2026 – Sep 2027**
MSc Energy Systems & Data Analytics *London*
- Will explore data analytics and modelling across energy systems, transport and the built environment

University of Bath **Oct 2022 – Jul 2026**
BEng Chemical Engineering (with placement) *Bath*
- Achieved 74% programme average (1st Honours)

WORK EXPERIENCE

Everoze **Sep 2024 – Jul 2025**
Solar & Storage Consulting Intern *Bristol*
- Reduced lender risk exposure across £500M+ in BESS and solar portfolios (650kWp to 360MWp) by synthesising 15+ technical due diligence findings covering site feasibility assessments, grid integration reviews and actionable risk mitigation recommendations
- Developed a hypothesis-driven solar site screening framework for two distilleries, by performing RAG assessment based on site feasibility criteria (grid proximity, environmental considerations and shading)
- Built a scalable CAPEX and OPEX forecasting model using Solver-based optimisation in Excel across BESS projects of varying sizes, reducing cost estimation time and synthesising data-driven client recommendations

PricewaterhouseCoopers **Aug – Sep 2023**
Advisory Intern | Capital Projects & Infrastructure *Kuala Lumpur*
- Strengthened a client's negotiation position on a £30M airline merger deal by structuring a benchmarking framework across 4 case studies, evaluating asset utilisation, reorganisation decisions and operational efficiency
- Sourced and normalised financial and operational metrics (asset turnover, profit per available seat kilometres and aircraft utilisation) from Capital IQ and Cirium, applying a MECE approach across airlines of varying sizes

ACADEMIC PROJECTS

Sustainable aviation fuel *(Final Year Group Design Project)* **Feb – Apr 2026**
- Led a team of 8 to translate an open-ended brief into a 135-page deliverable in 7 weeks, breaking down the problem into workstreams (process design, plant economics, sustainability), coordinating weekly task allocation and synthesising outputs across disciplines into coherent recommendations
- Built a multi-criteria decision matrix to evaluate feedstock options and production route trade-offs across economic, sustainability and ethical considerations, applying a structured framework to get an optimal solution

Sour water gas shift reactor design *(Final Year Individual Project)* **Apr – May 2026**
- Delivered a 70-page reactor design and process economic optimisation that identified a $38.4k/year in OPEX savings through a structured sensitivity analysis, demonstrating the ability to structure a complex technical problem systematically

ACTIVITIES

Accuracy Business Cup UK *(Participant)* **Feb 2026**
- Produced 10 slides in 2 weeks that evaluated the tariffs' impacts on the automotive market and Toyota US, and developed a 5-year strategy, applying structured problem-solving, data analysis and actionable recommendations

Bath Malaysian Society *(Lead Treasurer)* **Oct 2023 – Jun 2024**
- Managed £3,500+ annual budget and secured 5 new sponsorships to deliver events to 200+ members, demonstrating financial accountability, negotiation and stakeholder management skills

SKILLS AND QUALIFICATIONS

Technical skills: Excel (advanced modelling), MATLAB (model simulation), Python (data analysis) and PowerPoint

Certification: Capital and Financial Markets (Khan Academy) and Level 4 certificate (LIBF)

Interests: Gym, Tennis, Guitar and Baking
